EasyTrack FS

Featuring the Voyager portable lift

A true portable lift and transfer system for the home that's easy to transport and quick to assemble.

BHM
Because Health Matters

EasyTrack FS

The Easytrack FS is a free-standing, versatile solution for all types of point-to-point transfers - wheelchair to bed, bed to chair, even in the bathroom, anywhere there is a lift and transfer need.

The Easytrack FS has a safe working load of 440 pounds, or 200 kilograms. That's exceptional for a portable product making it suitable for use in most any home.

This equipment was designed to allow those with a mobility impairment to continue to live at home and enjoy many of your normal activities.

1

The light weight aluminium bases feature adjustable levellers to ensure that the unit remains perfectly stable and secure when assembled.

2

The posts have been designed to be self-aligning. Components only fit together one way to prevent any assembly errors and ensure the safety of the system.

3

The rail can be extended up to a width of 115 inches (3 meters). That is more than enough to span a king size bed.

4

To insert the top rail, the locking clamps on both posts are opened - pushing down on the security catch unlocks and opens the clamp and securely fasten the top rail in place.

5

The system can be adjusted to a height of 94.5 inches (2.4 meters). That is just short of the 8 foot ceiling found in most homes.

6

The telescoping posts include height indicators that allow you to adjust both posts for a perfectly level top rail. A special one-way locking mechanism ensures that the post cannot retract on its own.

7

The next step in readying your partner for transfer is to position the sling around him and secure the sling straps to the lift*.

8

A BHM portable, battery-powered rechargeable lift* is used to gently lift and assist you in the safe and secure transfer of your loved one.

BHM Medical...because health matters

* Lift shown is sold separately and not included with Easytrack FS kit.
